

# UNO® DRUM

## STG Soundlabs Library

### RELEASE NOTES

---

#### Overview

IK Multimedia is proud to offer a free downloadable sample set for the UNO Drum created by synthesizer luminary, Suit & Tie Guy, using his own STG Soundlabs analog modular synthesizer as the sound source. The analog drum tones are punchy and aggressive with the warm, organic quality that only real analog synthesis can provide. In addition the STG Soundlabs products, Suit & Tie Guy also hosts the much-revered annual Knobcon convention in Chicago, USA where synthesists and manufacturers from all over the world gather for exhibitions, lectures and concerts that celebrate the synthesizer culture.

This library replace just the factory PCM samples of UNO® Drum, while the existing Kits and Pattern presets remain unchanged. This means that after the installation, loading any Kit on UNO® Drum will sound different since it will load the PCM samples of the newly loaded library, but together with the already programmed sound parameters and patterns.
