TARGET - SPECIFICATION ELECTRICAL DATA

1. Description:

The frontend 4006 FH5 is specially designed for multimedia applications. Reception standard is I. The frontend includes a hyperband tuner which covers the frequency range from 45 to 860 MHz and an IF-part with SAW-filter, IF-amplifier, video and sound demodulator. The CVBS signal is via a video buffer available at the video output terminal (suitable for 75 Ω load), the audio signal (L+R) at the audio output terminal. Also a 2nd IF output is provided, which allows external sound demodulation for stereo and NICAM reception.

The reception frequency range is divided in VHF low, VHF high and UHF. Bandselection and tuning is done via I²C-bus, completely. Also a digital AFC-function can be realized, because the AFC-voltage, generated by the IF-demodulator is fed to an analog/digital converter which is included in the PLL-IC and readable via I²C-bus.

A DC/DC converter is built in. Therefore supply voltage is 5 V only.
